Name	Version	Updated by
Layout Custom Configuration	1.0	Mathias PFAUWADEL

Description

This layout allow you to configuring different specific that will modify the behaviours of evolve

Installation

https://github.com/casewise/cpm/wiki

you need to import this with automodeler :
https://github.com/nevakee716/CoffeeMaker/raw/master/automodeler_import.xls

it will a create an indexPage, z_custom_layout_configuration.

Usage

go on the indexPage z_custom_layout_configuration inside evolve,

configure your customs in this exemple Duplicate Button, click on the tab to select and configure another custom.

You can navigate inside evolve and see it active in your current session

When you finished click on the save icon

The configuration is now save inside your clipboard, copy it inside evolve designer, save & deploy. The configuration will be active for your model and all other users

Main.js

In order to work in your site, you need to have a main.js inside your deployment node, it can be empty
